Description

On his last Resting Bell-release "phantomshadows" Sean Monaghan aka Venus Vulture presented 4 abstract and beautiful ambient pieces with wide soundscapes and melodic patterns. His new release "Signal Artifacts" goes in a slightly different direction.

"Signal Artifacts" contains six very reduced and quiet pieces. Signal tones, glitches and noises are flying around. A hushed sound-pattern comes up and fades away. All tracks have some sort of droning fundament, sometimes really quiet or slowly evolving but the pieces have a aged feeling. Dusty, fragmental and coming from a very long travel from a very distant place.

The release includes twelve additional cover-pictures (Feel free to choose them for the individual tracks) and a video of "Radio artifacts - 18 June 2008"
